• Completely clean the computer or installed apps • Utilize your computer to its full potential • Eliminate bloatware and junk files • Some security software might interfere with the removal • Supplied with Smartfix utilities for Instant removal • Automatically scan before and after • No user-operation required • Rely on an international team of experts to make a perfect solution • No cost, no time, no updates, no ads Sylk is easy to install, as it's a portable application. Yet it can be uninstalled with no cost and no trace on the computer. This means that there will be no annoying bug reports when its users are attempting to uninstall Sylk because of the way it is being conducted. In addition, the latter is likely to remain on the computer until the user decides to remove it. With all things being relative, for users of Windows 8 and above, the program can be either cleaned (checked for startup/removed from the registry) or uninstalled (sent to the Recycle Bin or permanently deleted from the computer). Sylk, as with most junk cleaners, does not cause any performance issues, and provides an interface that is good-looking enough to impress users. As an example, Sylk's icon is a standard search box, as is the application's title, followed by the program's name (both placed on the taskbar). The application itself has just a drop-down menu which lists the task it is performing in real-time, and at the bottom there are three buttons. The first one enables users to opt-out of receiving error notifications; the second one is an indicator of whether the application is checking for startup/removal when launching; the third one is a "help" button. A simple and easy to use program, although users won't find much use for its many features or for its icon customization abilities. The program's image file is placed within the program folder, thus making it easier to find. That's about it in the way the program is conducted. Overall, it is an easy to use, although unassuming program that does not require many resources. The Symbantec CleanMyPC program has been designed to eliminate not only junk and spyware, but also files, tools and processes that might pose a threat to the PC. It does this by scanning the local hard drive, activating several scan tools and
